Service Advise Bulletin	SA -03
------------------------------------	---------------

Subject	Induced noise in Aircraft Audio system and/or VHF radio from EITS Camara.
----------------	--------------------------------------------------------------------------------------

Date of issue 12 APRIL 2023	Revision No. 0	Applicable Product All	
---------------------------------------	--------------------------	----------------------------------	--

Summary	There have been some reports of Radio/Audio noise being generated from the EITS Camera. Especially in the lower VHF comm frequencies. When the EITS camera is in close proximity to a VHF antenna this issue has been observed.
----------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Details	Recommendations: <ol style="list-style-type: none">1. Check the VHF antenna bases for cleanliness and correct bonding as per the AMM.2. Check the Audio feeds from the headset jacks the AIU and the AIU to the camera for correct connection of wiring shields as per the EITS100-WD. Ensure there are no earth loops created during the installation.3. If the problem still persists. Install ferrite beads on the camera power and ground wires. Secure these into the wiring loom as near as practical to the camera.
